

The Update Procedure through OTA v1 – Allview V1 Viper i4G / 20.07.2016

The software update advantages are:

- ✓ *software stability improvement;*
- ✓ *translation improvement;*
- ✓ *fixing minor bugs.*

WARNING! *The phone must be fully charged when initializing the procedure.*

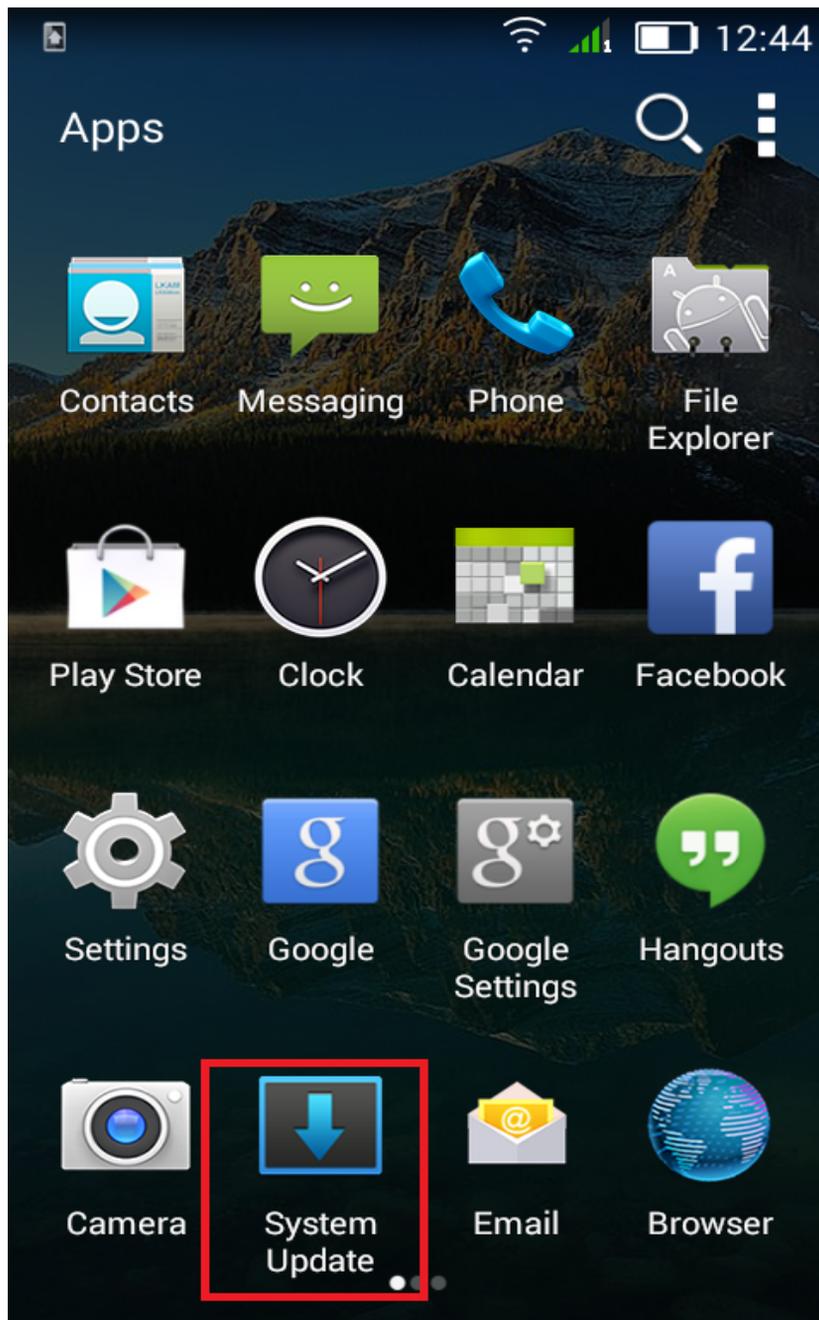

WARNING! *Please do not stop the update operation under any circumstances.*

The software update is an operation done on own responsibility by following the steps below.

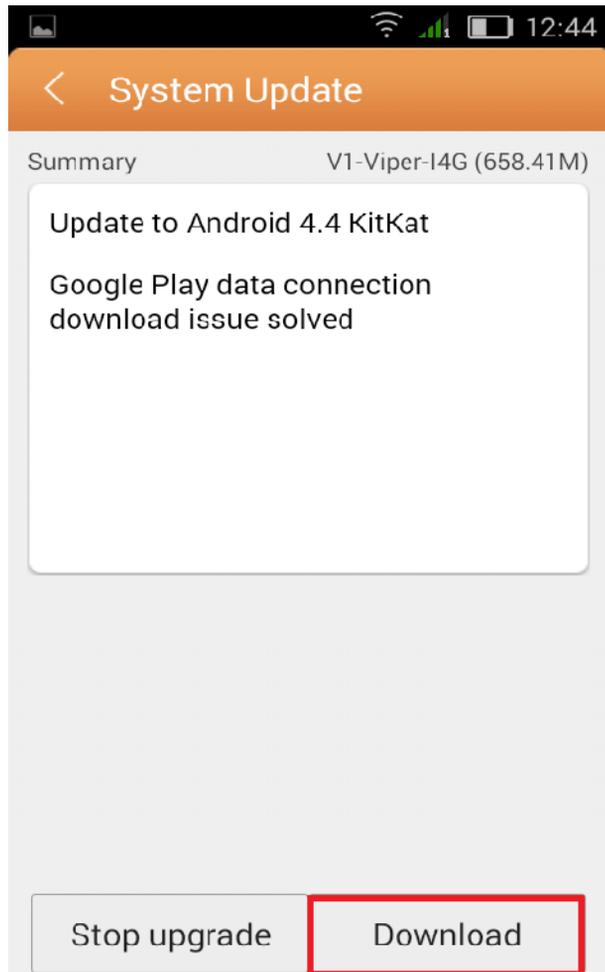

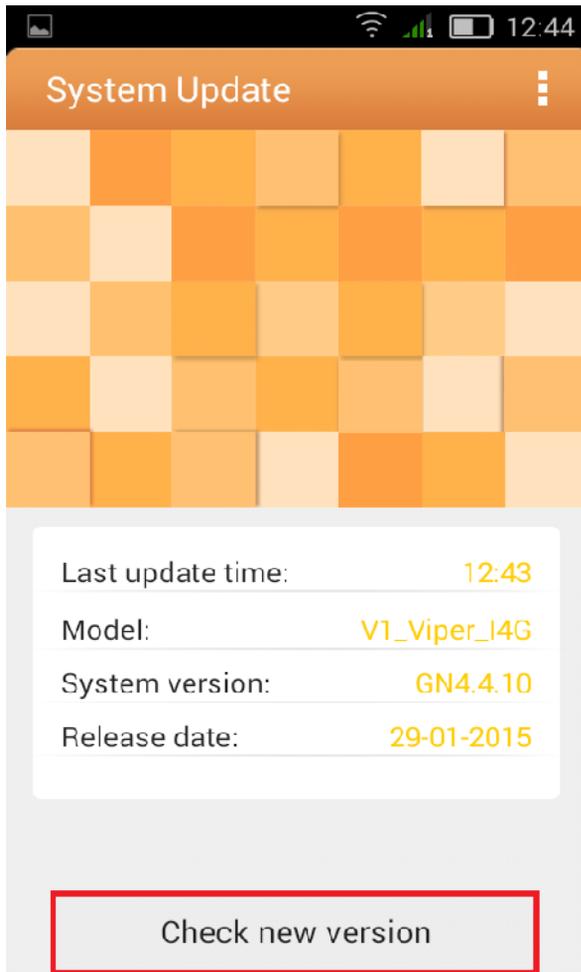

To update the software version of the **Allview V1 Viper i4G** smartphone, please follow the next steps:

1. Turn on the phone and connect it to a wireless network.
2. Open the "**System update**" app from the app menu:

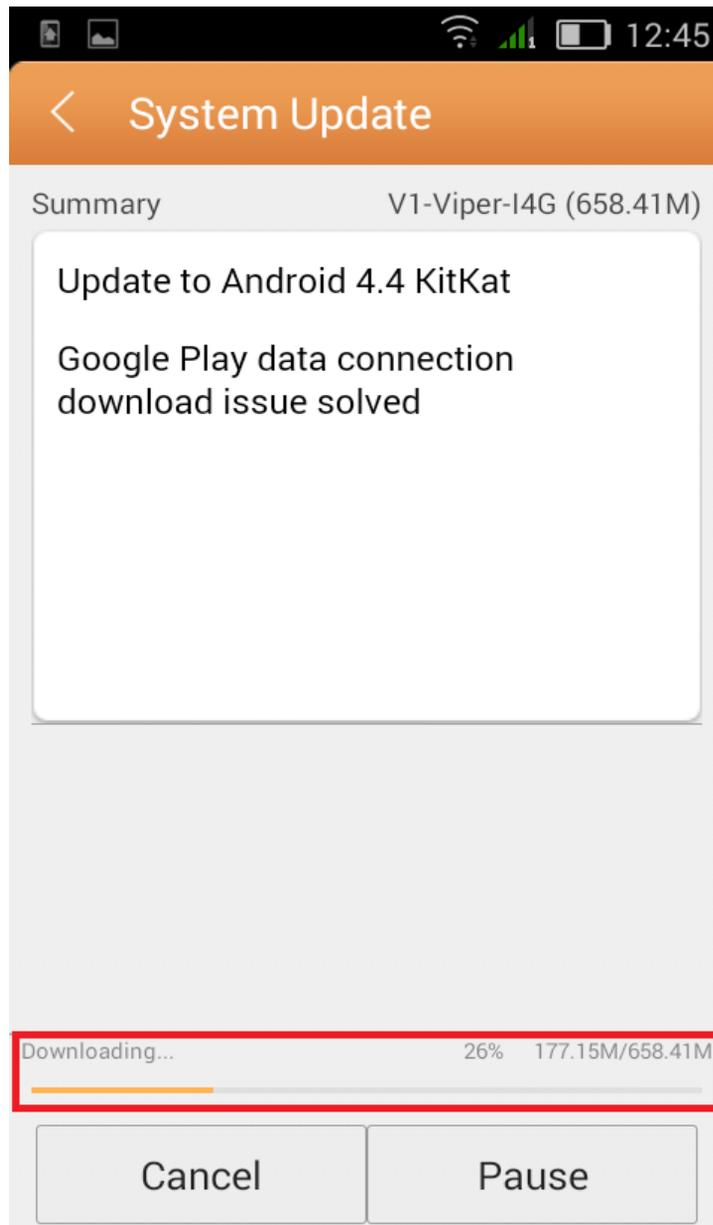

3. Select the option: **Check new version -> Download:**

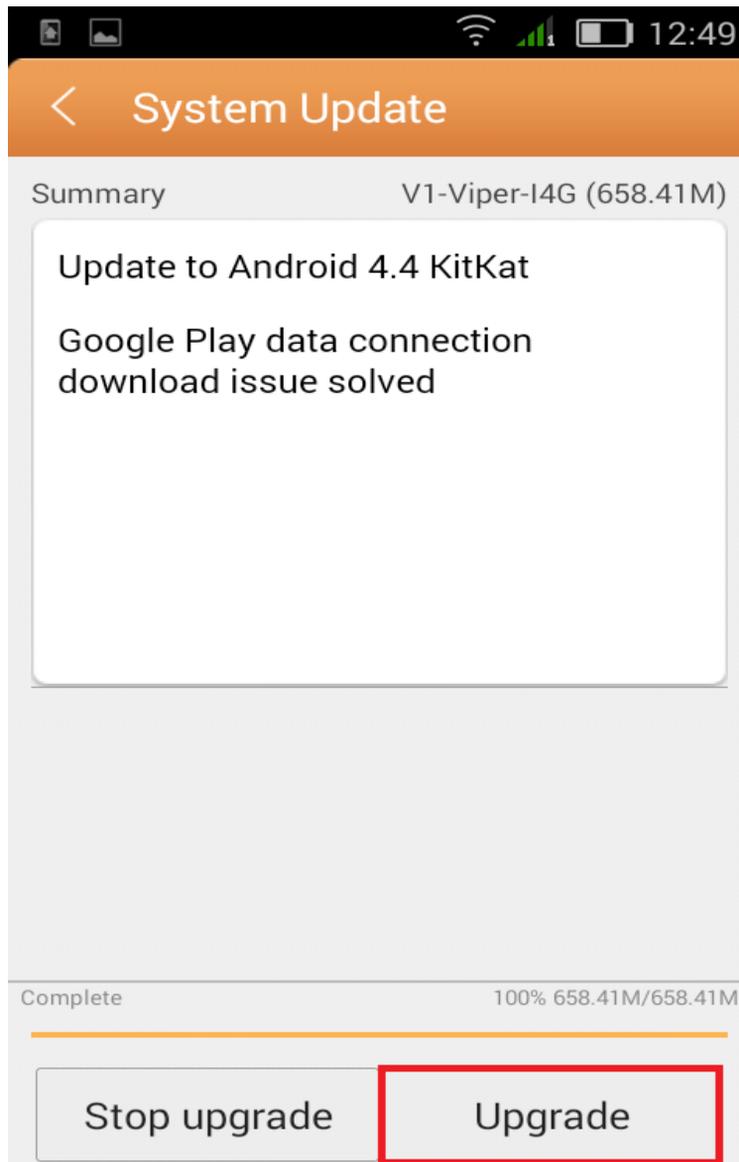

4. Please wait until the new software is downloaded in the internal storage or micro SD card of the phone:

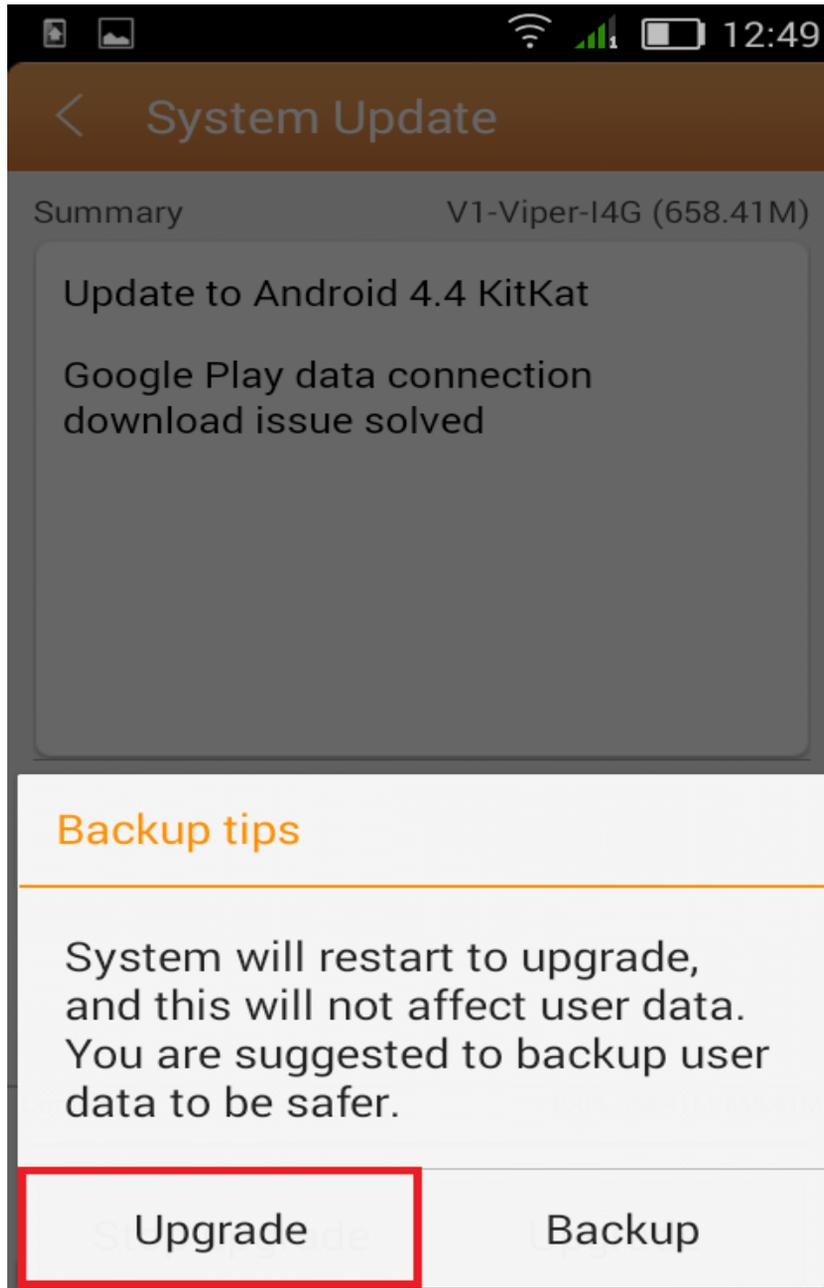

5. After the complete download of the software, please select **“Upgrade”**:

6. A message informing you on the software upgrade will be displayed:

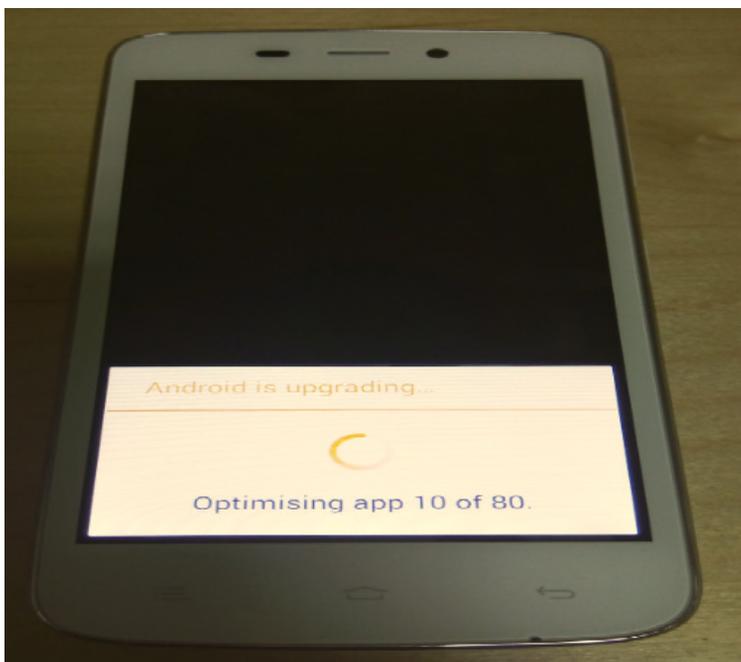

7. Select **Upgrade**. The phone will reboot and automatically start the update procedure:

8. Once the update process is over, the phone will reboot itself.

9. **“Android is upgrading”** will be shown on the phone’s screen.

The update file downloaded on the internal storage / microSD card will be automatically deleted once the update process is finished.

We recommend **Factory Reset** after the software update in order to prevent any errors.

WARNING! All personal info and apps will be deleted from your device after Factory Reset.
